Cloud-connected access to store networks

Swyft has the industry's most robust and massively scalable cloud-based automated retail software – designed in collaboration with partners like Netsuite, Intel and Cantaloupe Systems.

Retailers control their stores in real-time, with real-time data to manage merchandising decisions and create more efficient store networks.

Real-time dashboards

Login for a real-time overview of the entire channel. Report on anything.

Traffic monitoring

Stores measure and report traffic past the store, engagement with the store, and conversion.

Content management

All product information may be changed on the UX in real time.

UX analytics

Access your UX analytics to understand insights, conversion and abandonment.

Our constantly improving tool sets empower our clients to maximise returns, and the flexible Swyft Cloud SDKs allows easier addition of new functionality as new technology is brought to market.

With every store, you get:

Demand forecasting

Automated replenishment schedules using industry leading forecasting software.

Agile merchandising

Retailers alter assortments online, then fill stores with product. Simple!

Real-time pricing

Instantly change prices or even set prices to match competitors automatically.

Coupons & promos

Create promotions and coupon codes and send them to your consumers.
